# 1 Задание:

Сконфигурировать в своём домашнем каталоге репозитории svn и git и загрузить в них начальную ревизию файлов с исходными кодами (в соответствии с выданным вариантом).

Воспроизвести последовательность команд для систем контроля версий svn и git, осуществляющих операции над исходным кодом, приведённые на блок-схеме.

При составлении последовательности команд необходимо учитывать следующие условия:

- Цвет элементов схемы указывает на пользователя, совершившего действие (красный - первый, синий - второй).
- Цифры над узлами - номер ревизии. Ревизии создаются последовательно.
- Необходимо разрешать конфликты между версиями, если они возникают.

## 2 SVN:

### 2.1 Конфигурация репозитория:

```
svnadmin create repo
cd repo
svn mkdir -m "create structure" file:///home/studs/s336759/repo/trunk file:///home/studs/s336759/repo/branches file:///home/studs/s336759/repo/tags --username="DoraGotova"
svn checkout file:///home/studs/s336759/repo/trunk workspace
cd workspace
```

### 2.2 Список команд:

```
# r0
mv -f ~/src/commit0/* ./
svn add *
svn commit -m "commit r0" --username "DoraGotova"

# r1
svn copy file:///home/studs/s336759/repo/trunk file:///home/studs/s336759/repo/branches/fork_from_r0 -m "forked from r0" --username="DEAD_INSIDE_PSYCHO

```

## 4 Вывод:

В ходе лабораторной работы мы познакомились с системами контроля версий git и Subversion, их устройством, механикой и синтаксисом. В качестве вывода можно отметить, что git оказался значительно удобнее, более функциональным и гибким. Данное мнение разделяет и большая часть комьюнити пользователей систем контроля версий: на 19.04.2023 интернет-ресурс <https://svnhub.com/> закрыт по причине проигранной конкуренции GitHub'у.
